AIRFRAME STRUCTURES,
AIRFIELD SAFETY AND PROCEDURES
Oct./Nov. 2022
Time: 3 hours

THE KENYA NATIONAL EXAMINATIONS COUNCIL

DIPLOMA IN AERONAUTICAL ENGINEERING
(AIRFRAMES AND ENGINES OPTION)
(AVIONICS OPTION)

MODULE I

AIRFRAME STRUCTURES, AIRFIELD SAFETY AND PROCEDURES

3 hours

INSTRUCTIONS TO CANDIDATES

You should have the following for this examination:

Answer booklet;

Drawing instruments;

Mathematical tables/ Non-programmable scientific calculator.

This paper consists of EIGHT questions in THREE sections; A, B and C.

Answer THREE questions in section A, ONE questions in section B and ONE question from section C.

All questions carry equal marks.

Maximum marks for each question are as shown.

Candidates should answer the questions in English.

This paper consists of 3 printed pages.

Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.

SECTION A: AIRFRAME STRUCTURES

Answer **THREE** questions from this section.

1. (a) With the aid of labelled sketches, describe the forces that act on an aircraft in flight. (10 marks)
- (b) (i) With the aid of a labelled sketch, describe the construction of a semi-monocoque fuselage. (8 marks)
- (ii) Outline **two** advantages of a semi-monocoque fuselage construction. (2 marks)
2. (a) Outline **four** factors considered when determining the repairability of a sheet metal structure. (2 marks)
- (b) Discuss the classification of damages. (18 marks)
3. (a) Explain the effect of activation of **five** types of tabs. (7½ marks)
- (b) With the aid of sketches, discuss each of the following control surfaces:
 - (i) winglet; (3½ marks)
 - (ii) vortex generator; (5 marks)
 - (iii) stall fence. (4 marks)
4. (a) Outline the checks carried out on a helicopter after rigging of the flight controls. (8 marks)
- (b) Discuss each of the following helicopter controls:
 - (i) swash plate assembly; (7 marks)
 - (ii) anti-torque pedals. (5 marks)

SECTION B: AERODYNAMICS

Answer **ONE** question from this section.

5. (a) Explain **five** causes of wind with reference to the atmosphere. (10 marks)
- (b) With the aid of sketches, differentiate between airflow over each of the following body shapes:
 - (i) flat plate and sphere;
 - (ii) ovoid and streamlined.(4 marks)

- (c) Describe the development of boundary layer from laminar to turbulent. (6 marks)
6. (a) With the aid of labelled graphs, explain the relationship between the:
- (i) coefficient of lift and the angle of attack;
 - (ii) angle of attack and center of pressure position. (12 marks)
- (b) Air is moving through an aircraft engine at 40 m/s, the engine having an effective area of 300 m². Determine the mass flow rate through the engine. (4 marks)
- (c) Describe how an aircraft reciprocating engine generates thrust. (4 marks)

SECTION C: AIRFIELD SAFETY AND PROCEDURES

Answer ONE question from this section.

7. (a) A technician falls from a crane in an aircraft hangar and suffers a fracture. As the team leader:
- (i) outline **five** signs and symptoms you would look out for to confirm a fracture; (5 marks)
 - (ii) explain the first aid procedure you will perform on the casualty. (5 marks)
- (b) (i) Define the term 'aircraft danger zone' giving **two** examples. (2 marks)
- (ii) Outline **eight** precautions to be observed when taxiing a jet aircraft. (8 marks)
8. Discuss how each of the following human factors affect aviation maintenance proficiency:
- (a) lack of communication; (5 marks)
 - (b) complacency; (5 marks)
 - (c) distraction; (5 marks)
 - (d) lack of assertiveness. (5 marks)

THIS IS THE LAST PRINTED PAGE.
