INTRODUCTION TO ICT AND ETHICS
3 hours

INSTRUCTIONS TO CANDIDATES

This paper consists of EIGHT questions.
Answer any FIVE of the EIGHT questions in the answer booklet provided.
Candidates should answer the questions in English.

This paper consists of 4 printed pages.
Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.
1. (a) Outline four limitations of touch screen as an output device.  
(b) Describe each of the following ethical issues in regard to computer technology: 
   (i) patent rights; 
   (ii) trademark. 
(c) Computer technology has had positive impact to the society with respect to how people communicate. Explain three such impacts. 
(d) Explain three ways in which one would improve low personal self esteem at the place of work. 

2. (a) Outline four examples of negative impact that each of the following information accessed through the use of ICT would have on the society: 
   (i) pornography; 
   (ii) slander. 
(b) Describe how each of the following are used to threaten the privacy of personal data through computer technology: 
   (i) cookies; 
   (ii) electronic profile; 
   (iii) spyware; 
(c) Biometric devices have been used to control access to highly secured data control rooms. Explain three ways in which this has been achieved. 

3. (a) Outline two differences between a worm and a virus as used in computer security. 
(b) The following issues relate to the use of ICT in Kenya: 
   - using the office computer to do personal work; 
   - selling pirated software to a non-governmental organization; 
   - withdrawing cash from your parents bank account using ATM card without their consent; 
   - plagiarizing and using materials from the Internet for your class assignment without giving credit to the original author; 
   - sharing offensive messages about a particular community on twitter account; 
   - hacking into your school's database to change your examination results; 
   - reading a government officer's e-mail without his or her permission; 
   - posting a mock examination paper to your Facebook account before it is officially released to candidates; 

Classify each of these issues as either ethical or legal.

July 2018
A national examination system requires the use of direct input devices to capture data due to the large volume of data involved. Describe two types of input devices that may be suitable for this system.

Every business that employs people regardless of its size and industry experiences various organizational conflicts.

(i) Explain three causes of such conflicts.

(ii) Outline two effects of such conflicts to the organization.

4.
(a) Outline four advantages of digital cameras over analogue cameras.

(b) Many Internet service providers have continued to replace coaxial cables with fiber optic cables for Internet connectivity. Explain three reasons for this trend.

(c) Explain two types of random access memory of a computer system.

(d) Information technology has lately been introduced in many manufacturing plants. Explain three benefits of using this technology to the manufacturing industry.

5.
(a) Joan has two choices of desktop publishing packages from which to buy one for the company. Explain four factors she should consider assuming the cost is the same for both packages.

(b) The following is a list of tasks that an organization carries out on a daily basis:
   - data collection and analysis on market opportunities for its products;
   - storage of employee’s data;
   - creation of organization documents.

Identify the appropriate type of software the organization would use for each task, justifying your choice.

(c) Computers use utility software to enhance the operation of the operating system. Explain three examples of such software.

6.
(a) Explain three situations where the monitor may not be an appropriate output device.

(b) Many companies face the challenge of electronic waste due to computerization. Explain three factors that contribute to the production of such waste.

(c) With the aid of four examples, describe the term microcomputer as use in computer systems.

(d) Explain two circumstances under which a dot matrix printer would be a suitable output device in an organization.

7.
(a) Outline four functions of the operating system with regard to file management.

(b) Most learning institutions have computerized their financial operations. Explain three ways that the system could help minimize fraud.
(c) A software development company stores its programs in CD-ROMs for sale. Explain two benefits of this move to the company.

(d) Call center staff spend most of their time using computers for data entry.

(i) Explain two health-related problems to the staff that would be caused by each of the following devices:

(I) keyboard;

(II) CRT visual display unit.

(ii) Suggest one solution for each of the devices that would minimize the associated health risks in (i).

8. (a) A software development company has employed a systems programmer. Outline four duties that could be assigned to the programmer.

(b) Differentiate between intrapersonal and interpersonal types of conflicts in an organization giving an example in each case.

(c) Many organizations have raised the concern that most graduates looking for employment lack soft skills. Explain three such skills that the organizations seek.

(d) A commercial bank has offices in several floors of a building and other branches within the same city. The company intends to install a computer network to link all their offices. With the aid of a diagram, describe the most appropriate type of network for the company.
